BOOK SYNOPSIS

This 10th-anniversary edition of Bruce Lipton's best-selling book "The Biology of Belief" has been updated to bolster the book's central premise with the latest scientific discoveries and there have been a lot in the last decade. "The Biology of Belief" is a groundbreaking work in the field of new biology. Former medical school professor and research scientist Bruce H. Lipton, Ph.D., presents his experiments, and those of other leading-edge scientists, which examine in great detail the mechanisms by which cells receive and process information. The implications of this research radically change our understanding of life, showing that genes and DNA do not control our biology; instead, DNA is controlled by signals from "outside" the cell, including the energetic messages emanating from our positive and negative thoughts. This profoundly hopeful synthesis of the latest and best research in cell biology and quantum physics has been hailed as a major breakthrough, showing that our bodies can be "changed" as we retrain our thinking."
